Transforming Agriculture with Innovation

Karyotica Labs

At Karyotica Labs, we turn agricultural byproducts into powerful biostimulants using our cutting-edge enzyme-associated microbial fermentation process. Our solutions empower growers to achieve higher yields, reduce costs, and minimize environmental impact, while simultaneously promoting sustainable growing practices.

Our Revolutionary Products

Product Showcase

Grow Fast

All around plant growth solution

A water-soluble amino acid product designed for efficient nutrient absorption and versatile application.

Thrive

Soil Based Growing Formula

Boosts rapid growth and root establishment while increasing resiliency to stressors.

Bountiful

Hydroponics Formula

Increases Yields while enhancing nutrition, and shelf life of fruits and vegetables

Why Farmers Choose Karyotica Labs

Our Value Proposition

Our Solutions for Modern Agriculture

Smart Solutions

Sustainable Growth Solutions

Our products enhance plant growth, nutrition, and yields while reducing the need for chemical fertilizers aligning with eco-friendly practices.

Enhanced Resilience

Strengthen crops to withstand drought, salinity, and other environmental stresses.

Cost-Effective Farming

Lower input costs by reducing the need for expensive fertilizers and minimizing application time.

for Growing

High-End Horticulture.

Enhance the quality and yield of premium fruits, vegetables, and ornamental plants

Vertical Agriculture

Maximize productivity in vertical farming setups with optimized nutrient delivery.

Controlled Environments

Achieve unparalleled results in greenhouses, hydroponics, and other controlled growing systems.

Revolutionizing Turf Care – Coming Soon!

Get ready for a game-changer in turf management! Our upcoming liquid formulation for grass is designed to control growth, enhance greenness, and improve resilience to climate stressors making it the ideal solution for golf courses, sports fields, and landscaping.

Testimonial

What Our Clients Say

Real Results, Real Stories. See What Farmers Are Saying

William Baillie

CFO/COO of Fiber Source Processing Inc.

FIBERSOURCE

"Karyotica Labs has completely transformed our agricultural practices. Their biostimulants have significantly boosted our crop yields, even in challenging conditions. Quick Growth! Crops germinated and emerged from the soil in only 3 days.

The resilience our plants have gained against drought and salinity is truly remarkable. We highly recommend their products to any grower looking to enhance their productivity sustainably."

Hemp Carbon Standards

THRIVE Biostimulant

"Karyotica Labs has truly set a new standard for agricultural innovation with their signature biostimulant, THRIVE. In 2023, THRIVE revolutionized hemp farming in Nova Scotia, helping growers achieve an astonishing 10.4 metric tons (MT) of carbon sequestered per hectare, even under suboptimal growing conditions marked by drought and flooding. This remarkable achievement was validated through an international comparative study involving farms across the UK, USA, Spain, Western Ukraine, and Canada. The results from Nova Scotia stood out thanks to THRIVE's unparalleled ability to boost plant resilience and optimize growth. By treating hemp seeds with THRIVE, farmers witnessed germination and soil emergence in just three days, forming a rapid canopy that gave the plants a crucial head start. This early advantage led to taller plants, greater biomass production, and significantly enhanced resilience to environmental stressors. The rapid growth was a key driver in the increased carbon storage, proving THRIVE's efficacy in both crop productivity and

environmental impact. Karyotica Labs' products, particularly THRIVE, are essential additions to modern farming practices, supporting the growth of hemp and a variety of agricultural and horticultural crops while acting as a form of crop insurance against challenging growing conditions. We are incredibly excited about the future of carbon sequestration in farm crops facilitated by THRIVE and other Karyotica products. This advancement holds immense potential for boosting carbon credit revenues, benefiting farmers and the planet alike. THRIVE has undoubtedly proven itself as a game-changer, and we look forward to seeing its continued impact on sustainable agriculture."

Our commitment to sustainability

The Future of Growing Food

At Karyotica Labs, sustainability is at the heart of everything we do. By transforming organic byproducts into powerful biostimulants, we're helping growers reduce their environmental footprint while increasing productivity. Together, we can create a more sustainable, eco-friendly future for agriculture
